6 Job Title: Full Stack App Developer (React Native + Node.js)

• Location: On-site (Mumbai)

Type: Full-Time

Domain: EdTech / SaaS / Media / B2C Platforms

Reporting To: Mr. Tanishq Harlalka (Project Head & Management)

About the Role

We're looking for a skilled and proactive **Full Stack Mobile App Developer** to take end-toend ownership of our cross-platform mobile application. You will work across the full technology stack—**designing**, **building**, **and maintaining both frontend and backend** with a sharp focus on performance, security, and user experience.

If you're passionate about creating **functional**, **elegant**, **and scalable mobile apps**, and are looking to join a fast-moving team building tech for a real-world use case, we'd love to talk to you.

% Scope of Work

- Build and maintain a cross-platform mobile app (Android + iOS)
- Develop secure, scalable, and modular backend APIs
- Implement light and dark themes using reusable design tokens
- Integrate real-time features like chat, booking, class updates
- Work with media handling: video streaming, audio lessons, and PDFs
- Implement role-based access: Admins, Teachers, Students, Moderators
- Ensure optimal performance, app store deployment, and OTA updates

• Collaborate closely with UI/UX team and project stakeholders

Tech Stack

♦ Frontend:

• Framework: **React Native** (with TypeScript)

• State Management: Redux Toolkit / Zustand

• UI Libraries: NativeBase, ShadCN, Material UI

• Navigation: React Navigation

• Networking: Axios / Fetch API

• Storage: React Native MMKV

• Animations: Reanimated, Lottie

Backend:

• Framework: **Node.js** (with **Express.js** / **NestJS**)

• Database: MongoDB (NoSQL)

• Authentication: Firebase Auth, Auth0, or Custom JWT

Cloud Storage: AWS S3 / Firebase Storage

• Notifications: Firebase Cloud Messaging (FCM)

• Real-time Features: Socket.io / Firebase Realtime DB

i Security & Optimization Standards

• JWT: Token-based authentication

• Bcrypt + Salt & Peppers: Password hashing

• JavaScript Obfuscator & Terser: Secure & optimized code

• **Helmet.js**: Secure HTTP headers

• Sentry: Real-time error tracking

• Winston: Backend logging & monitoring

Proposition Design Guidelines

- Light & Dark theme implementation
- Typography: Palanquin (Primary), Heebo (Secondary)
- Mobile responsiveness & pixel-perfect UI consistency across devices

Bonus Skills (Nice to Have)

- Experience with Firebase video/audio tools
- Understanding of CI/CD for mobile apps
- Previous experience in EdTech, SaaS, or LMS products
- Contribution to open-source / personal GitHub projects

What You'll Get

- Ownership of high-impact products from scratch
- Opportunity to work closely with business and design teams
- Flexibility to recommend libraries, tools, and improvements
- Exposure to a large user base and community interaction
- Performance-linked bonuses and growth path
